

- 1.** Give short answers for the following questions: (16)
 - i. Outline the four key components of attachment.
 - ii. "A child's first attachment is called a 'prototype' of all future attachments." Why?
 - iii. What is Bowlby's Theory of Attachment?
 - iv. What does the term 'monotropy' mean?
 - v. What is the maternal deprivation hypothesis?
 - vi. If attachments are not formed, according to Bowlby, there could be two serious consequences. What are these?
 - vii. Explain Bowlby's concept of Internal Working Model.
 - viii. Outline the long term consequences of maternal deprivation.

- 2.** Explain Harlow's maternal-separation and social isolation experiments performed on rhesus monkeys. (4)

- 3.** Define the following terms: (5)
 - a. Attachment
 - b. Deprivation
 - c. Privation
 - d. Evolution
 - e. Separation and anxiety

Activity (5)

Meet the mother of a child, who was separated from her for some time (for any reason, i.e., child being stayed in hostel, or mum being hospitalised). Ask the mum whether this separation brought any changes in the child's personality or how was child's reaction when he met his mum after the separation period. Produce a report on your findings.
