

## Tips for small room to look larger

### 1. Use a simple colour scheme

The simpler the colours you choose, the bigger your room will look. Colours should be bright. Paint the ceiling with white for it gives a sense of height and space. Do not use dark and bold paint for the ceiling for it will make the room look smaller. For the walls, use neutral tones for it will give an illusion of added space. Do not crowd your wall with wall hangings. Leave at least one wall without it to have an impression of space.

### 2. Arrange furniture to allow more traffic

### 3. Use creative storage

Use creative storage spaces by installing a good closet system. Instead of standard dressers and armoires, make use of built in furniture. Extend storage furniture to the ceiling so that you won't waste any space. Hanging cabinets are also good for saving spaces.

### 4. Place a huge Mirror

Mirrors can contribute a lot in making your room look bigger.

### 5. Use beds with head boards only

Avoid beds with a foot board so that you can still use the space under it for keeping storage bins. But it is okay to use a headboard. You can even decorate you headboard or have an accent wall above it or can even decorate it for added beauty.

6. Use simple fabrics

Choose a neat and simple fabric in bright and warm colours. Plain coloured fabrics for bed linens and curtains would work well for a small room. Do not use fabric with large patterns and bold colours for it looks bulky and heavy to the eyes.

## 7. Keep things Hidden

Clutter makes the room look crowded. Provide space to hide magazines, books and others things.
